

Lighting as a Service

A concept so simple, it's revolutionary

A new LED lighting system from Tenzing cuts your lighting costs by up to 90%. A portion of those cost savings is used to pay for the upgrade; the remainder goes to your bottom line. As a result, you're cash flow positive from day one, and you don't invest a nickel.

Stress-Free Because it's Turnkey

We manage the entire project, from providing and installing the LED lighting system to ongoing maintenance.

Expand your profits

With no capital expenditures, you're free to upgrade a single building or your entire portfolio, including office space, corporate campuses, hospitals, warehouses and more.

Real World Tested

More than 45 million square feet have been upgraded with no cost using the Lighting as a Service concept, and the numbers are growing every day.

Why Lighting as a Service is a Smart Business Decision

\$0

ABSOLUTELY NO UPFRONT COSTS

The energy savings generated by the project pay for everything, from buying/installing the LED lights to project supervision and ongoing maintenance. Your monthly service payments are billed as a saved energy utility payment, based on the kilowatts saved.

YOUR SAVINGS ONLY INCREASE OVER TIME

Lighting as a Service is not a lease. Once the project is paid for, you own the updated lighting system, and all of the energy savings created by your LED lighting and controls go directly to your bottom line for years to come.

YOU HAVE NOTHING TO LOSE EXCEPT HIGH ENERGY BILLS

Your first consultation with Tenzing is free, and there's absolutely no obligation.
